

Presentation No. Seven Part One

RECENT TRENDS IN TOBACCO PORTION AUTOWEIGHING

Mr. M. D. Sanderson

AMF INT'L.

Available: Transcript - Yes
Pre-conference excerpt - Yes

Mr. Sanderson discussed accurate weight control of cut tobacco, as in roll your own, by application of a radioactive source whose signal, being altered by the specific tobacco mass, is detected, interpreted and sent back to a computer controlling the tobacco measuring conveyor.

Presentation No. Seven Part Two

RECENT TRENDS IN TOBACCO PRE-CONDITIONING

Mr. R. E. G. Neville

AMF INT'L.

Available: Transcript - Yes
Pre-conference excerpt - No

Mr. Neville's paper is quite thorough and does not lend itself to a brief summation. Perhaps this is the reason the excerpt only outlines what will be discussed. A good elementary paper comparing traditional pre-conditioning to new methods employing steam/air jets to open the leaf of bales and hogsheads.
